# Static Website Hosting on AWS

Steps:

1. Launch an EC2 Instance

- Open AWS Management Console and create a new EC2 instance.

2. Connect to the EC2 Instance

- Use SSH to connect to your EC2 server.

3. Install Apache2 Web Server

- Install the Apache2 web server on your EC2 instance.

4. Upload Your Static Website

- Copy your HTML, CSS, and other static files to the web server directory.

5. Configure Security Groups

- Allow inbound traffic for HTTP (Port 80) and HTTPS (Port 443) in your EC2 security group.

6. Access Your Website

- Open a web browser and visit your EC2 public IP address to see your static website live.
